

Documentation

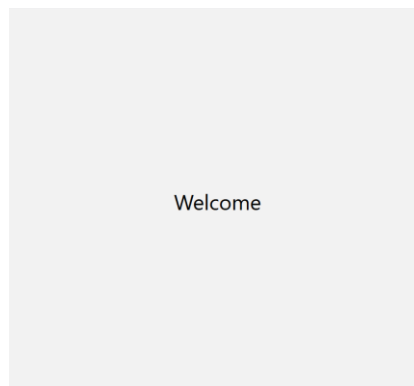

Application: Budget Week App

GitHub: <https://github.com/aarekr/budgetweekapp>

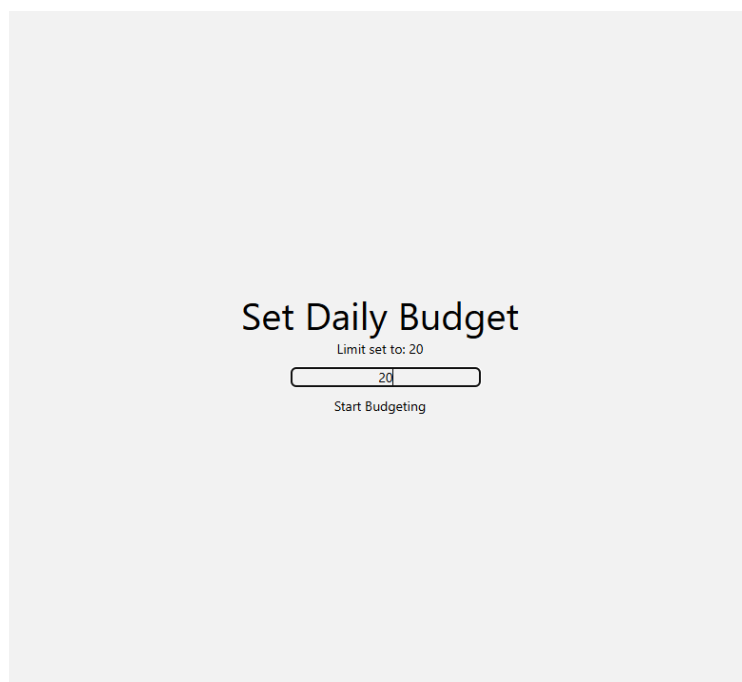

How to use the application

Screens:

- 1) The application starts on the **Welcome screen**, and it is displayed for 3 seconds after which the application moves to the next screen. Users can't interact with this screen.

- 2) On the **Set Daily Budget screen**, users are asked to enter their daily budgeting limit and press Start budgeting. If a user doesn't enter any value, the application displays an alert warning notifying that a value has to be given

- 3) On **Today screen** users have two input items: choosing the day for which the budgeting is done and entering the expenses including spend category

MONDAY

Today's expenses so far: 0.00

- The red “Reset budget to zero” allows users to reset their budgets and start from the beginning.

Application structure

Navigation: the app uses Stack and Tab Navigation.

- Stack Navigation is used for screens Welcome, Set Daily Budget, and Main
- Tab Navigation is used on the Main screen, and users can navigate between screens Today and Summary using tabs.

Local Storage is used for saving data when the app is run.

Styles are in a separate file that is imported to files that need the styles.

Functions file is meant for storing files that do not require imported or state items inside other files.
